What's Inside?

This textbook is divided into four parts:

1. **Algebra:** This part covers the basics of algebra, including linear equations, inequalities, polynomials, and matrices.
2. **Calculus:** This part covers the basics of calculus, including limits, derivatives, integrals, and differential equations.
3. **Probability and Statistics:** This part covers the basics of probability and statistics, including probability distributions, statistical inference, and regression analysis.
4. **Geometry and Topology:** This part covers the basics of geometry and topology, including Euclidean geometry, differential geometry, and algebraic topology.

Each part of the textbook is written in a clear and concise style, with plenty of examples and exercises to help you understand the concepts. The textbook also includes a glossary of mathematical terms and a set of appendices with useful mathematical formulas and tables.

Why Choose This Textbook?

There are many mathematics textbooks on the market, but this one is uniquely designed for college graduates between the ages of 22 and 26 who are pursuing further education in graduate school. Here are just a few of the reasons why you should choose this textbook:

- **It covers the topics you need to know:** This textbook covers the essential mathematics topics that you will need to succeed in graduate school.

- **It is written in a clear and concise style:** The textbook is written in a clear and concise style, with plenty of examples and exercises to help you understand the concepts.
- **It includes a glossary of mathematical terms:** The textbook includes a glossary of mathematical terms, so you can easily look up any unfamiliar terms.
- **It includes a set of appendices with useful mathematical formulas and tables:** The textbook includes a set of appendices with useful mathematical formulas and tables, so you can easily find the information you need.
